

GTU CSE 241 / 501 Quiz

Std Code: 304

Std Number:

2	1	0	1	0	4	0	0	4	0	1	7			
---	---	---	---	---	---	---	---	---	---	---	---	--	--	--

```
#include <iostream>
using namespace std;
class Digit {
    private :
        int digit;
    public :
        Digit();
        Digit(int value);
        void output();
        void inc();
        void add(const Digit& d);
        void check_digit();
};
```

```

Digit :: Digit()
    : digit(0)
    {}

Digit :: Digit(int value)
    :digit(value) {
        check_digit(); //checking if it is valid
    }

void Digit :: output(){
    cout<<digit<<endl;
}

void Digit :: inc(){
    digit +=1;
    if(digit>9){
        digit =0;
    }
}

void Digit :: add(const Digit& d){
    digit = digit + d.digit;
}

void Digit :: check_digit() {
    while(digit <0 || digit >9){
        cout <<"Error ! Digit is an invalid"<<endl;
        cout<<"Enter a valid digit value "<<endl;
//exit(1); My teacher always did using exit
        cin >> digit ; //user must enter a valid digit
    }
}

//Not My class is Digit and variable is digit!

```
